Yearly balance for crude oil and oil products

The yearly balance for crude oil and oil products presents all the national and cross-border transactions for these energy sources that took place in one year. An overview is thus given of the production of oil products, of international trade (importation by country of origin and exportation by country of destination), of the deliveries to international aviation and marine bunkers, of the consumption by economic sector.

<i>Data revision - practice</i>	The internal coherence of the data, its coherence compared to other years and compared to the regions is analyzed during the creation of the balance and this for all historic data. If a lack of coherence is detected or if new elements are provided, estimations based on regional and historic data can be made.
